Fullstack software engineer with hands-on experience building EdTech products using React, FastAPI, and AWS. Comfortable across the stack — from pixel-perfect UI to cloud infrastructure and AI integrations.

EXPERIENCE

mAlk Education · Software Engineer (Intern → Frontend → Fullstack)

Jul 2024 – Present | Tel Aviv, IL

- Built the authentication flow (login/signup) and project dashboard in React + Redux, serving as the primary entry point for all student and teacher sessions.
- Designed and implemented Web Bluetooth connectivity to micro:bit devices, enabling real-time hardware control from the browser.
- Developed core platform features using React, Redux, and WebSockets.
- Implemented a PayPal-based payment system.
- Built a client-side execution mode that eliminated round-trip API calls for code evaluation, significantly reducing server load and improving UX.
- Integrated an AI chatbot using Amazon Bedrock and S3, including RAG, intent detection, and structured tool-calling for contextual student support.
- Designed and developed an automated growth-hacking tool that automates lead discovery, web scraping, and cold outreach; implemented a stateful campaign sequence with SMTP delivery of custom-styled HTML emails and randomized interval delays to optimize inbox placement and conversion rates.

SKILLS

Languages & Frameworks: JavaScript, TypeScript, Python, C, C++, React, Redux, Node.js, FastAPI, HTML/CSS

Cloud & Infrastructure: AWS (Bedrock, S3, EC2), GCP (Vertex AI), Docker, Kubernetes, PostgreSQL

Tools & APIs: WebSockets, Web Bluetooth API, JWT, Git, Cursor

Languages (spoken): English (fluent), Hebrew (fluent), Arabic (native), Spanish (A2)

EDUCATION

Shenkar College

B.Sc. Software Engineering | Oct 2020 – Oct 2025

Relevant coursework: Algorithms & Data Structures, Artificial Intelligence, Databases, Computer Architecture, Machine Learning, Object-Oriented Programming, Fullstack Development.

PROJECTS

Shenkard — Multiplayer Card Game

Online real-time multiplayer card game where players are matched randomly. Built with Unity / C#, .NET, SQLite, hosted on AWS EC2.

Damage Assessment & Resolution Platform

Web platform matching clients with damaged goods to qualified service providers. Stack: Node.js, React, JWT auth, MongoDB, AWS S3; integrated Google Maps and YouTube APIs.
